ADDRESS

Lange Marktstraat 1, 8911 AD Leeuwarden, The Netherlands

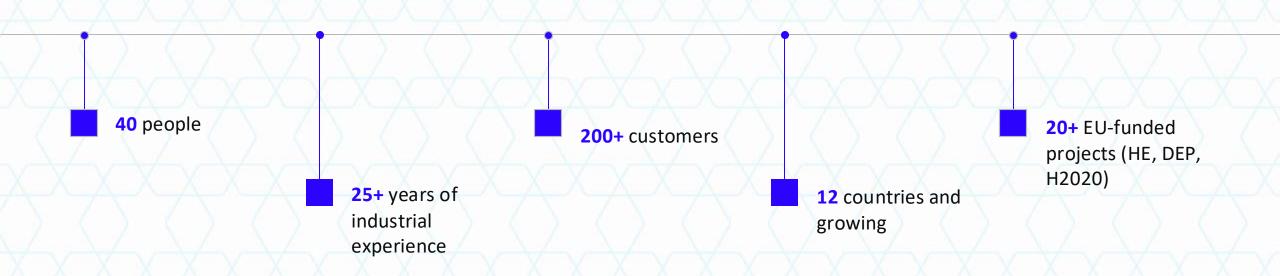

Who we are

We offer maintenance software solutions and consulting services for more than 25 years!

Product portfolio & Customers presence

Industrial Data Analysis Platform

Sibyl - Turn-key solution for predicting incidents and optimizing your shopfloor with Industry 4.0 technologies

CMMS/EAM/CAFM

Aimms - A complete solution to simplify operations, processes, and management of your maintenance department

Total Productive Maintenance

TPM - Modern methods and practices to achieve worldclass maintenance

Case Study

PHILIPS Drachten

PHILIPS Drachten: What started in 1950 as a small shaver factory is nowadays one of the largest innovation and production sites of Philips in Europe.

Over 1500 employees of more than 30 nationalities are continuously working on new, innovative products and further improvement of our processes.

Table of contents

01

BUSINESS UNDERSTANDING

Ask relevant questions and define objectives for the problem that needs to be tackled.

07

DATA VISUALIZATIO

Communicate the findings with key stakeholders using plots and interactive visualizations.

02

DATA MINING

Gather and scrape the data necessary for the project.

DATA SCIENCE
LIFECYCLE

sudeep.co

03

DATA CLEANING

Fix the inconsistencies within the data and handle the missing values.

06

PREDICTIVE MODELING

Train machine learning models, evaluate their performance, and use them to make predictions.

05

FEATURE ENGINEERING

Select important features and construct more meaningful ones using the raw data that you have.

04

DATA EXPLORATION

Form hypotheses about your defined problem by visually analyzing the data.

Image from <u>Sudeep.co</u>

Cold-forming Cutter

BUSINESS UNDERSTANDING Ask relevant questions and define objectives for the problem that needs to be tackled.

Key Figures

16 machines in flow

800K – 900K products per week

24 hours, 7 days a week

2 operators per shift, 21 shifts per week

1 - 3% fall off

 \pm 150 (machine and quality) datapoints per product

Cold-forming Shaving and One blade

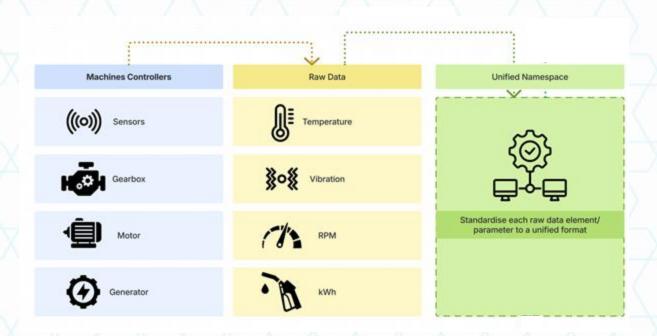

Key Figures

Expand to two different lines

250 to 500 PPM

Micro precision Cold-forming

Data Acquisition

Data Sources

- Production Data (MES)
 - Product
 - Machine status
 - Machine scrap
- Process Data
 - PLCs / controllers
 - Additional sensors
 - o Etc.
- Maintenance Data (CMMS/EAM)
- Events

The evolution of data 2100 ~500 Q measurements kb / product Every 0.2 seconds 300 Process parameters Full product traceability Real-time process data 2100 kb/cap Every 4 seconds **Pressto** ~400 Q measurements 2024 450 Process parameters Virtual product traceability Live process data 128 kb/cap ~400 Q measurements 200 Process parameters K140 / Pressto Virtual product traceability ~300 Q measurements 2018 K130 100 Process parameters 2014 Virtual product traceability ~120 Q measurements 02 50 Process parameters SR3 Carrier traceability 2010 **DATA MINING** kb/cap SR1

Case Study Characteristics

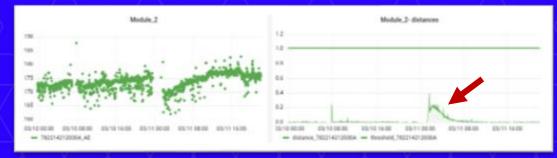

Change of Material

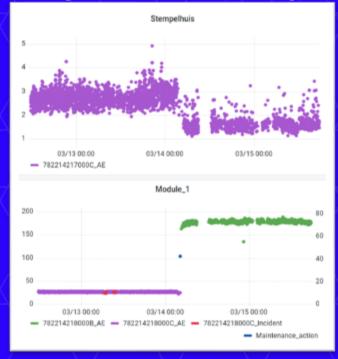

Human Intervention (Periodic Quality Check)

Cold Start

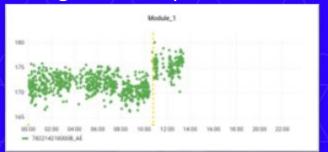

Changes in Modules (tooling)

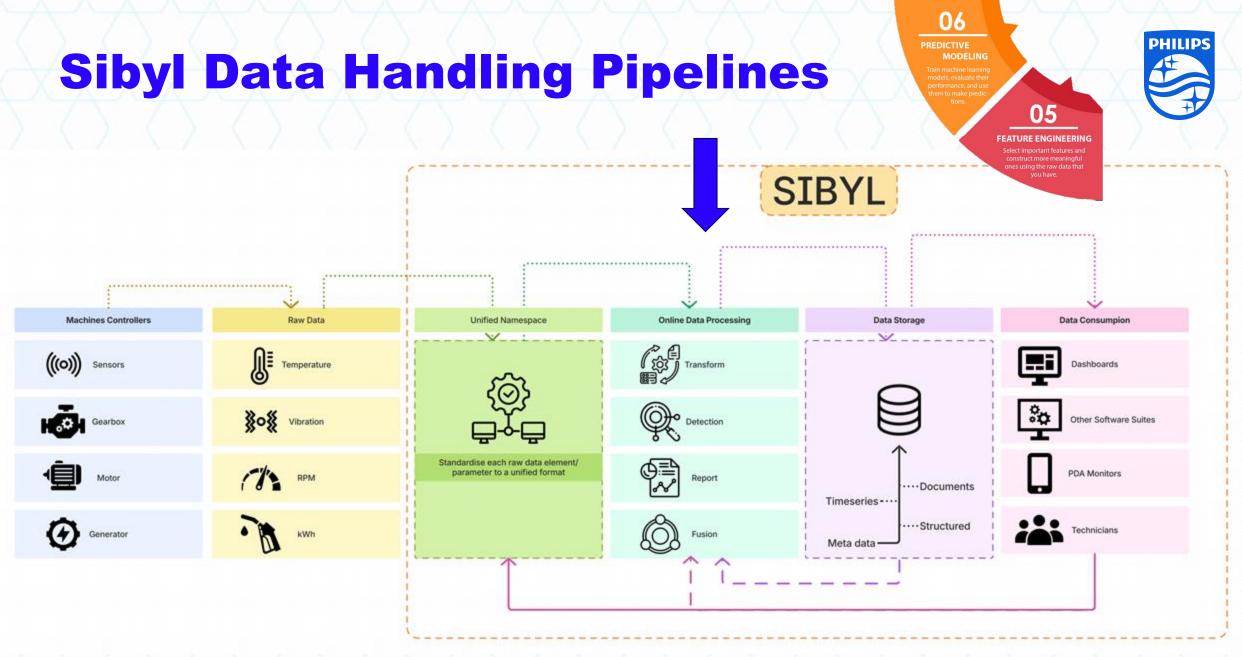

04 DATA EXPLORATION

Form hypotheses about your defined problem by visually analyzing the data.

Changes in the Speed

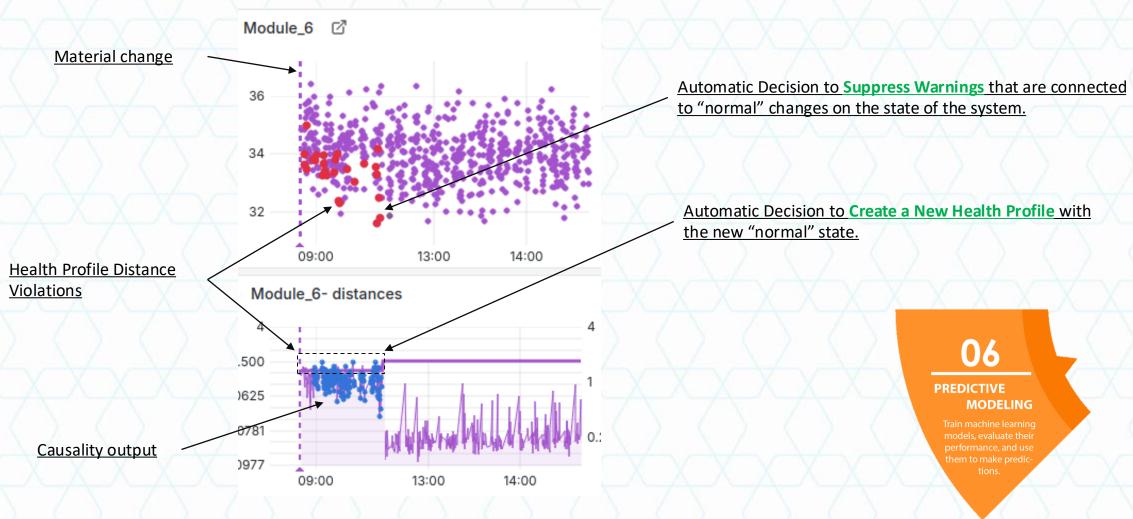

Technical Dashboards

Tackling False Positives

Context-aware Validation

O6
PREDICTIVE MODELING

PHILIPS

Train machine learning models, evaluate their performance, and use them to make predictions.

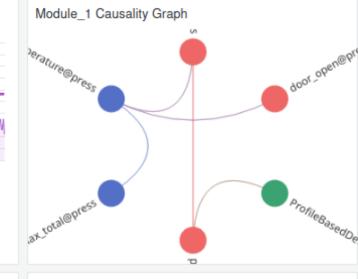

Automated root-cause analysis surfaces the highest-impact problems.

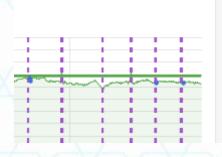

False Positive Alarms identification and suppression

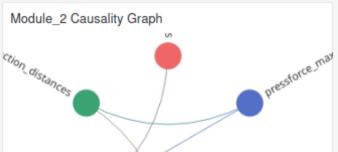

True Positive Alarms enhancement, based on user feedback

	Predicted: Abnormal	Predicted: Normal
Actual: Abnormal	True Positive	False Negative
Actual: Normal	False Positive	True Negative

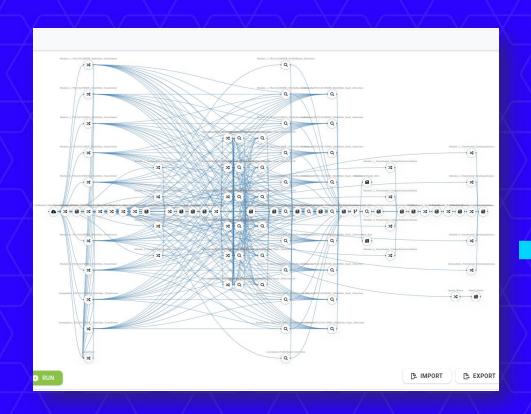

07

DATA VISUALIZATION

Communicate the findings with key stakeholders using plots and interactive visualizations.

Making Complexity Simple

Complex processes....

...translated to simple results

Combination of multiple results to provide simple output to the end user, with increased accuracy.

Realized benefits

PHILIPS

Lifetime extension

The lifetime of tooling has been extended by up to a factor of three.

Early Fault Detection

Act before (hidden) faults escalate into serious damage.

Business impact

Significant contribution to reducing maintenance costs by 46%.
